

This is a Java sample application:

```
package com.example.demo;

import org.springframework.boot.SpringApplication;
import org.springframework.boot.autoconfigure.SpringBootApplication;

@SpringBootApplication
public class DemoApplication {
    public static void main(String[] args) {
        SpringApplication.run(DemoApplication.class, args);
    }
}
```

Markdown also provides the possibility to use inline code formatting throughout the entire sentence.

Another possibility is to set block code without specific highlighting:

```
./mvnw spring-javaformat:apply
```
